MAKERS SINCE 1984

After

Transform any blind in minutes with an elegant colour-matched pelmet that will conceal the blinds working mechanism and block out all daylight that streams through the top of the blind. Ready for any model: Roller, Vertical and Roman.

YOU KNEW YOU  
NEEDED IT...YOU JUST  
DIDN'T KNOW WHERE  
TO FIND IT!

No screws are needed to fix the brackets to any new or existing blind. Simply release the retaining screws which hold the existing brackets, slide the Cov-A-Blind™ brackets into place and retighten the retaining screws.

**The Cov-A-Blind™ pelmet can then be placed into position, held securely by two magnetic plates.**

The unsightly roller mechanism is now invisible and unwanted early morning light banished. Cov-A-Blind™ can transform any make or model of roller, roman, or vertical blind. It can also be retro-fitted to any blind already in situ. Minimal fixtures are needed and these along with simple instructions are supplied with Cov-A-Blind™.

The Cov-A-Blind™ pelmet is available in three different depths, and in a number of colours and wood finishes. You can also paint it to match the colour of an existing blind or a room's colour scheme with our repaintable finish.

Cov-A-Blind™ can also be adapted to suit any type of window.
